About

I’m Amira Galal, a Flutter Developer passionate about building mobile applications with Flutter. I enjoy bringing ideas to life through clean interfaces and thoughtful details, while also exploring the logic and functionality behind each application. I’m continuously developing my Flutter skills through hands-on projects, with a focus on creating applications that are well-designed, functional, and user-friendly.

EDUCATION & TRAINING

Bachelor’s Degree in Computer Science

Damanhour University

Cross Platform Mobile App Developer

DEPI — CLS Learning Solutions • Present

Cross Platform Mobile Development Trainee

ITI • Oct 2025 – Mar 2026

Database Fundamentals

Information Technology Institute (ITI) • Jul 2025 – Aug 2025

02 /

Skills

PROGRAMMING

Dart | Object-Oriented Programming (OOP) | Callback Functions

FLUTTER DEVELOPMENT

Flutter | Stateful & Stateless Widgets | UI & Layouts | Navigation | Lists & Grids | Forms & Validation | Gestures & User Interactions | Reusable Widgets

STATE MANAGEMENT

setState() | Provider | ChangeNotifier | Consumer

TOOLS

Visual Studio Code | Android Emulator

SERVICES

01 Flutter App Development

Building functional mobile applications with Flutter, including structured interfaces, navigation, user interactions, forms, and application logic.

02 Flutter UI Implementation

Turning app ideas and interface concepts into clean, structured Flutter screens with reusable components and attention to visual details.

PROJECT 01 /

Small E-Commerce App

OVERVIEW

A small Flutter e-commerce application that allows users to browse a list of products and manage a shopping cart. The project uses Provider for state management to handle cart updates across the product and cart screens.

WHAT I PRACTICED

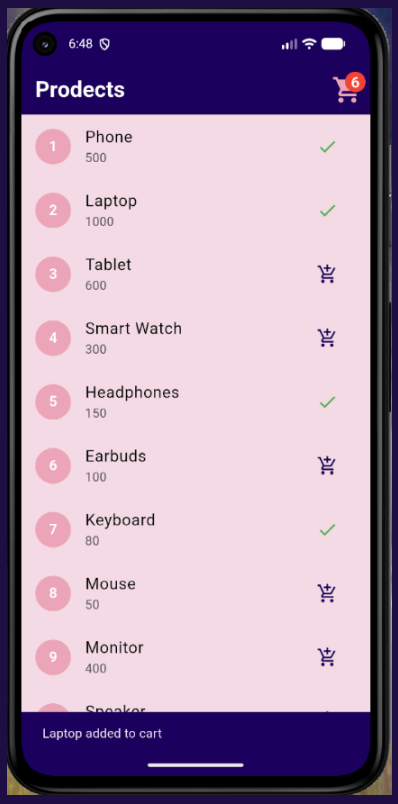

This project helped me practice state management using Provider and ChangeNotifier, while working with shared cart data across multiple screens. I also practiced handling product and cart operations, updating the UI based on state changes, preventing duplicate items, and calculating the cart total.

KEY FEATURES

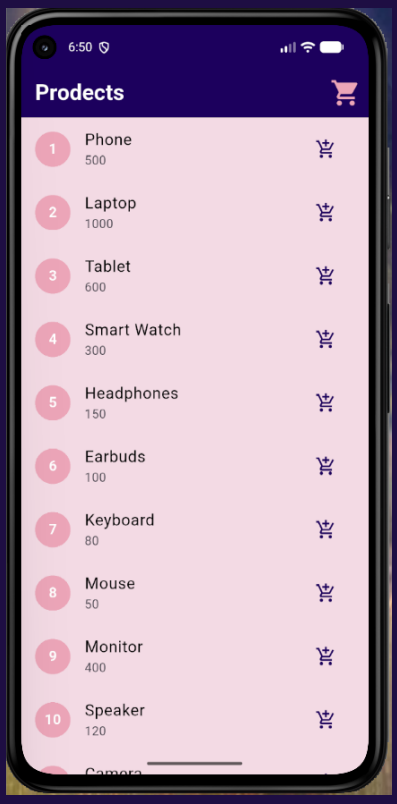

- Displaying a list of products with their names and prices
- Adding products to the shopping cart
- Preventing the same product from being added more than once
- Updating the product action icon when the product is already in the cart
- Displaying the number of items currently in the cart
- Navigating from the Products screen to the Cart screen
- Removing individual products from the cart
- Clearing all products from the cart
- Calculating the total price of the cart
- Showing SnackBar feedback when a product is added

TECHNOLOGIES / CONCEPTS

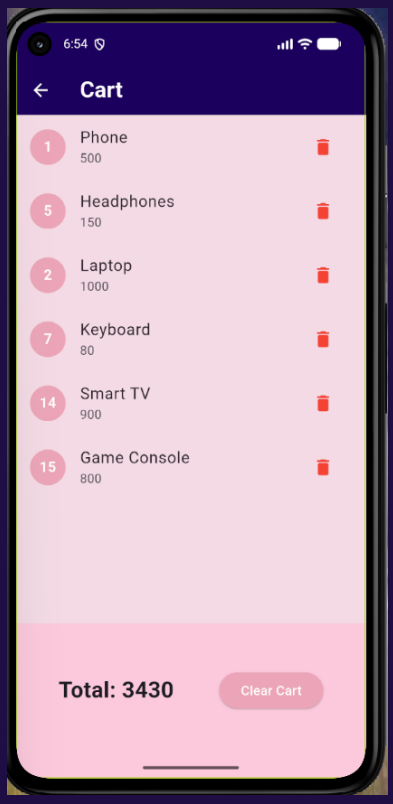

Flutter · Dart · Provider · ChangeNotifier · Consumer · State Management · ListView.builder · Navigator · MaterialPageRoute · Custom Classes · SnackBar · fold()

PROJECT 02 /

Multi-Screen Navigation App

OVERVIEW

A small multi-screen Flutter application built to practice navigation, reusable UI components, list-based layouts, and basic state updates.

WHAT I PRACTICED

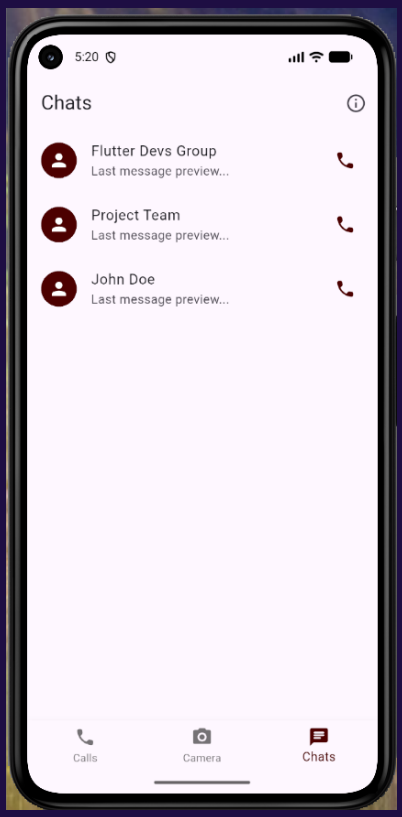

I practiced organizing several related screens inside one Flutter app, switching between sections, navigating to detail pages, displaying local lists, and updating simple state.

KEY FEATURES

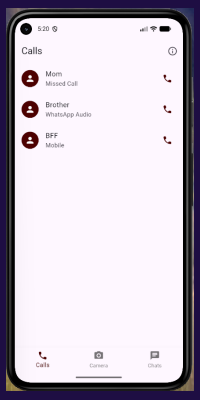

- Bottom navigation between Calls, Camera, and Chats
- Navigation from Chat items to a Chat Details screen
- Navigation to an About screen from the app bar
- Calls and Chats lists using local data
- Photo counter updated with setState()
- Dynamic bottom-navigation selection
- Reusable Contact and Chat UI components
- Passing a chat name through a constructor

TECHNOLOGIES / CONCEPTS

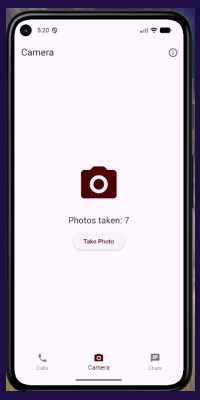

Flutter · Dart · StatefulWidget · StatelessWidget · setState() · BottomNavigationBar · IndexedStack · ListView.builder · ListTile · CircleAvatar · Navigator · MaterialPageRoute

PROJECT 03 /

Contacts Management App

OVERVIEW

A Flutter contacts application featuring a dynamic contact list, swipe-to-delete interaction, contact details navigation, and automatically generated contact initials.

WHAT I PRACTICED

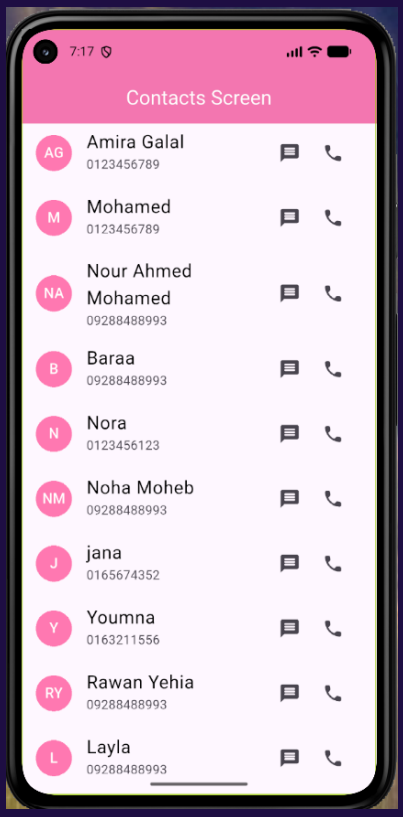

I practiced working with local model data, reusable row widgets, callbacks, swipe gestures, dynamic list updates, and passing data between screens.

KEY FEATURES

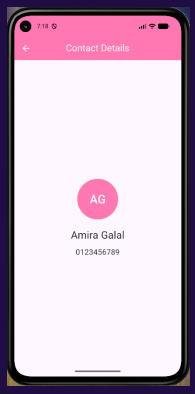

- Displaying a list of local contacts
- Swipe-to-delete using Dismissible
- Removing contacts dynamically with setState()
- Navigating to a contact details screen
- Passing contact name and number through a constructor
- Generating initials for contact avatars

TECHNOLOGIES / CONCEPTS

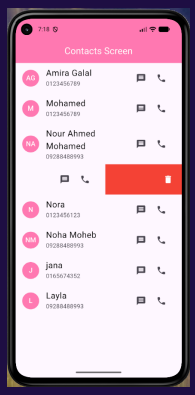

Flutter | Dart | StatefulWidget | StatelessWidget | setState() | ListView.builder | Dismissible | ListTile | CircleAvatar | Navigator | MaterialPageRoute | Callback Functions

PROJECT 04 /

Flutter Interactivity & Gestures

OVERVIEW

A practical Flutter project focused on user interactions and gesture handling. It explores single tap, double tap, long press, and two-finger multi-touch scaling, with dynamic UI updates, color changes, zoom interactions, and SnackBar feedback.

WHAT I PRACTICED

I practiced connecting gesture callbacks to state changes and visual feedback, including multi-touch scaling and transient user messages.

KEY FEATURES

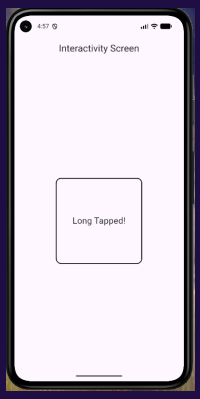

- Single tap interaction
- Double tap interaction
- Long press interaction
- Two-finger multi-touch scaling
- Dynamic UI updates with setState()
- Color change interaction
- Zoom in and zoom out interactions
- SnackBar feedback for user actions

TECHNOLOGIES / CONCEPTS

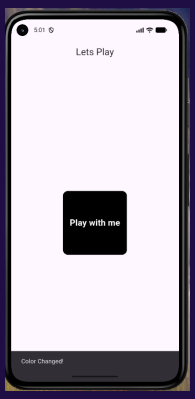

Flutter | Dart | StatefulWidget | setState() | InkWell | GestureDetector | onTap | onDoubleTap | onLongPress | onScaleUpdate | Transform.scale | SnackBar

PROJECT 05 /

Flutter UI & Layout Projects

OVERVIEW

A collection of Flutter UI projects focused on building structured interfaces, exploring different layouts, and creating visually consistent designs. The project includes a personal business card that explores a simple personal branding approach, along with different profile UI variations.

WHAT I PRACTICED

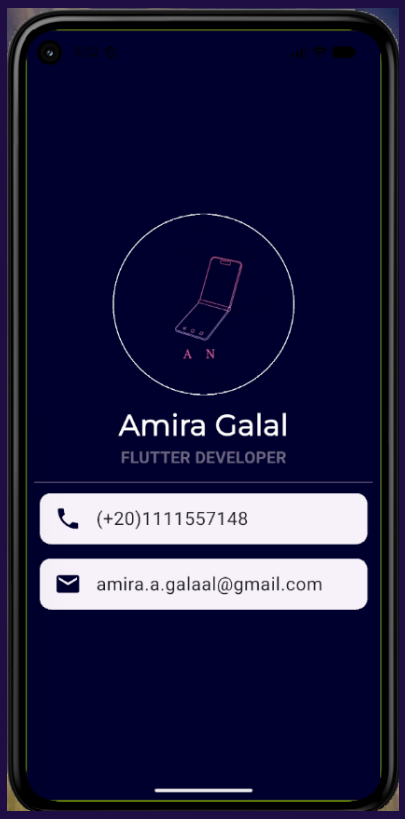

I practiced building polished static interfaces from scratch, experimenting with composition, spacing, cards, images, typography, and different layout structures.

KEY FEATURES

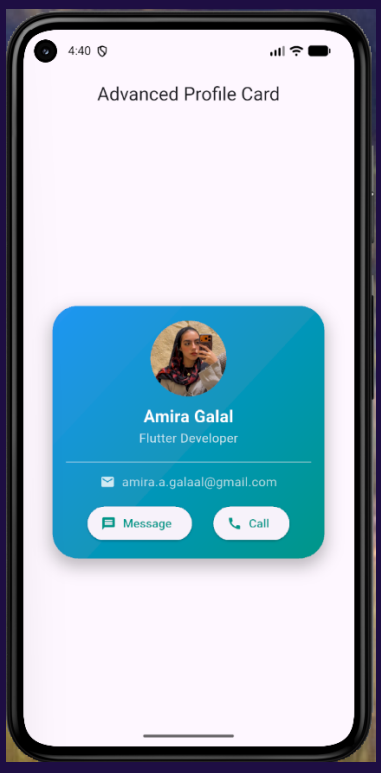

- Structured Row, Column, and Stack layouts
- Profile and business-card interface variations
- Custom colors, spacing, typography, and visual hierarchy
- Cards, gradients, borders, shadows, and rounded shapes
- Local image assets and CircleAvatar components
- Reusable layout patterns with standard Flutter widgets

TECHNOLOGIES / CONCEPTS

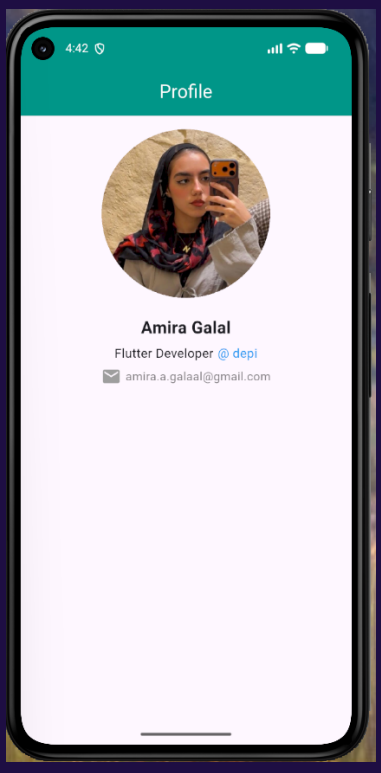

Flutter · Dart · Row · Column · Stack · Container · CircleAvatar · AssetImage · LinearGradient · BoxDecoration · BoxShadow · Card · ListTile · Divider

Selected Practice Projects

Login Form & Validation

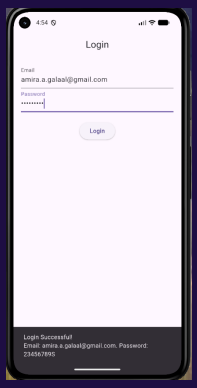

A Flutter login form project focused on form handling and basic input validation. The project uses a Form with validation rules for email and password fields, saves the entered values, and provides feedback through a SnackBar after successful validation.

TECHNOLOGIES / CONCEPTS

Flutter | Dart | Form | TextFormField | GlobalKey<FormState> | validator | onSaved | SnackBar

VALIDATION

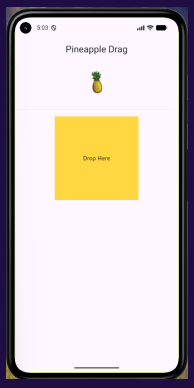

SUCCESSFUL VALIDATION

Drag & Drop Interaction

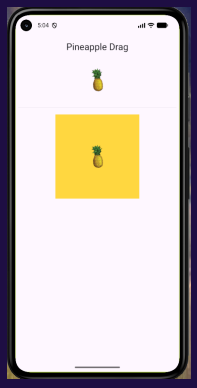

A Flutter interaction project focused on implementing drag-and-drop behavior. The project allows a pineapple image to be dragged into a designated drop area, with the dropped item displayed inside the target and an option to remove it using a double-tap.

TECHNOLOGIES / CONCEPTS

Flutter | Dart | StatefulWidget | setState() | Draggable | DragTarget | GestureDetector | Image.asset
